

POLY – PETROL / DIESEL SEAWATER PUMP

The Poly series of centrifugal pumps has been purpose built to aid the transfer of aggressive but non-abrasive liquids such as chemical and sea water that would generally bring about corrosion of the aluminium rubber and cast iron parts that are commonly located in engine driven pumps.

Available as either a petrol or a diesel fuelled centrifugal pump, they are ideal for applications such as chemicals, marine, sea water, agriculture industry, and diesel transfer. The Poly pumps are constructed with stainless steel fasteners and reinforced polyester.

The construction of the Poly Pump means that it is capable of handling a large number of chemicals used in agriculture, detergents and sea or salt water. If you need to pump acids or diesel, then you can purchase either a Viton or a Buna seal kit for a small additional cost.

There are a number of different options available in the Poly series however, these pumps are either powered by a Yanmar diesel engine, or a Honda OVH engine. The petrol pumps in the Poly series each come with an oil alert.

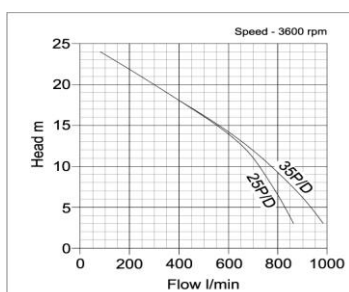

The recommended suction lift is 6m, however, they can go up to a maximum of 8m if required. It is always advisable that you speak to a member of our team directly to ensure that you are purchasing the right option for your chosen application, especially so with this type of pump.

25P

Suitable for:

- Sea water
- Agriculture
- Industry
- Chemicals
- Diesel transfer

Model	Inlet (mm)	Outlet (mm)	Engine	Fuel	HP	Oil Alert	Flow (l/min)	Head (Mtrs)	w x l x h (mm)	Dry Weight	Packing Weight
